

INVENTORY II™

Customer testimonial

Pulse MedTech Group (www.pulseeng.com)

- a global leader in the design of advanced miniature components and solutions for hearing Instruments and advanced acoustics medical devices - has been using Microsoft Dynamics AX since version 2.0 - with more than 600 users from 10 countries running 24/7 on the same central system placed in Denmark, Pulse MedTech Group is one of the largest and most experienced Microsoft Dynamics AX installations in the world.

Being global with customer specific production in Far East and Europe, sales in Europe and the US, the demand for fast and reliable inventory information has increased significantly over the recent years. This global operation requires 24/7 live operation as there are active users working on the system 24 hours a day 7 days a week. Before implementing Inventory II there was a huge problem with the daily Master schedule because the production plan was not known at the beginning of the day in Far East,

simply because the standard AX Master scheduling was not able to generate the data based on the European and US daily sales during the "night" between closing in the US and opening in the Far East. Thus there was a really strong demand for being able to run Master scheduling during daily operation with no downsides such as blocking locks and performance impact.

So when asked: Why did you invest in Inventory II? - It-manager Frits Correl says:

We invested in Inventory II because of 24/7 capabilities, major improved performance, no blocking locks, strong reconciliation functionality, cost price alert functionality, and of course real-time calculated cost prices.

After implementation of Inventory II Pulse MedTech Group again knows at the beginning of the day in Far East what to produce due to Inventory II's 24/7 capabilities and performance optimization.

Pulse

A TECHNITROL COMPANY

The Inventory II™ module for Microsoft Dynamics™ AX is an extension to the standard Inventory module. Inventory II™ applies to companies looking for advanced inventory management or high scale transaction volume capabilities. Inventory II™ is available for 3.0, 4.0, 2009 and 2012 versions of Microsoft Dynamics™ AX.

And when asked: What about performance?

- Frits Correl says: It runs like "Grease Lightning" - after implementation of Inventory II our average CPU load is between 1%-4% compared to 10%-20% before implementation of Inventory II - the daily Master scheduling is executing in less than 2 hours compared with 7 hours before Inventory II implementation and our daily on-line inquiries are responding with on-hand information with no delay at all. Furthermore the heavy Inventory value reports execute with a speed you won't believe until you have seen it with your own eyes. Frits Correl continues: this is all because of the brilliant Watermark technology which ensures that the number of open transactions is kept at a very low level even though we have a huge number of daily transactions in the system.

Business System Manager Christian Hessing

is further adding that after implementation of Inventory II General ledger / Inventory reconciliation is done with far less internal resources than used to be spent on this very boring task.

Finally both Christian Hessing and Frits Correl

are mentioning that being able to skip the traditional inventory monthly closing gives them one weekend per months to be with their families instead of being with the Pulse family - so that's of course also a great benefit of the Inventory II implementation.

IT-manager Frits Correl and
Business System Manager Christian Hessing

FSB Development

FSB Development is a software company developing modules for Microsoft Dynamics AX.

The Inventory II module for Microsoft Dynamics AX is an extension to the standard Inventory module. Inventory II applies speed and simplicity to the standard Inventory module. Inventory II is the right choice for companies looking for real-time advanced inventory management and/or high scale transaction volume capabilities and/or 24/7 operation. Inventory II is available for version 3.0, 4.0, 2009 and 2012 of Microsoft Dynamics AX.

Inventory II is sold via certified Dynamics AX partners in more than 30 countries. More than 150 Dynamics AX customers with over 15000 AX users have chosen Inventory II.
